SpeedSwivel FDC Adapter is Fast, Strong, and Easy-to-Use

Red Head Brass is now the exclusive manufacturer and distributor of the patented SpeedSwivel FDC adapter— the firefighters' solution to stolen or vandalized fire sprinkler and standpipe connections.

Solution to Stolen or Missing Brass Swivels

When brass swivels are missing from a FDC, the male threads on a fire hose are no longer compatible. SpeedSwivel is the missing piece for firefighters to quickly connect and pressurize FDCs to achieve sufficient water and nozzle pressure to attack the fire.

The SpeedSwivel has teeth and sliding segments that will engage with the exposed groove on an FDC that has a missing brass swivel. A few spins of the easy-to-use rocker lug coupling and the SpeedSwivel connection is complete.

Patented in 2014, SpeedSwivel was developed by a retired fire captain who also served as a fire inspector. SpeedSwivel has been placed on the inventory of hundreds of fire trucks in the United States and Canada including Chicago, Phoenix, Denver, Portland, and Toronto.

Don't let a missing swivel slow you down!

RED HEAD
BRASS, LLC

Made in the USA for Toughness

Now available from Red Head Brass distributors, SpeedSwivel is manufactured with the highest commitment to quality as all Red Head Brass connectors and features:

- Hard coat anodized aluminum components for high strength and lower weight
- Tested at 1000 psi static pressure, without leaks or failure
- Compliance with NFPA 1962
- Optional protective dust cap for truck storage is available
- Portable
- Easy to use
- Rapidly restores the FDC water supply for fire crews
- Most installations do not require a spanner wrench
- Small demonstration training snoot is also available

**Make a SpeedSwivel FDC adapter part of every fire apparatus inventory.
